

FACE RECOGNITION AND PERSON-CENTRIC VIDEO ANALYTICS

SAFR® for Geutebrück is an AI layer on top of your VMS, providing advanced video analytics that save time, increase efficiency of surveillance operations, and enhance physical security.

SAFR matches faces appearing in live video feeds against watchlist images more effectively, and with less bias, than humans – helping security personnel prioritize feeds that require review and providing them the information they need to respond to persons of interest more quickly. Transform video feeds into streams of actionable data with SAFR – the best performing face recognition for live video.

KEY FEATURES

Live Video Overlays & Match Event Details

SAFR event details, including live video overlays and side-by-side display of face recognition events, deliver unmatched efficiency for surveillance operators. Display critical information maintained in SAFR directly on the operator's screen.

Automatic Enrollment

Easily and efficiently enroll individuals appearing on Geutebrück VMS directly into SAFR's identity database.

Events

Trigger an event in Geutebrück based on SAFR event details such as name, age, gender, and other parameters. This provides rich, searchable metadata that allows for more efficient post-event investigation.

Alarms and Notifications

Custom alarms instantly notify security personnel when persons of interest approach a monitored area, or when strangers appear in restricted spaces. Easily configure a variety of automated responses to detection and recognition events.

99.87% recognition accuracy

Match speeds under 100 milliseconds

24/7 Monitoring
